Ladtech HDPE Manhole Rings should be
written into your next job specification.

DID YOU KNOW...

- Ladtech products are Manufactured to ASTM D4976 Standards
- Ladtech is designed to AASHTO H-25 highway standards
- Ladtech HDPE rings will pass I & I EPA standards
- LADTECH ADJUSTING RINGS ARE IMPACT RESISTANT

DON'T TAKE OUR WORD FOR IT...

Mike Simons has used Ladtech products for over 12 years!

"They are better than any adjusting rings around & I do not like using concrete and mortar. There are so many reasons why I like the Ladtech System and so many advantages over the concrete products that it is just the right choice."

Mike Simons - MN Contractor, CW Houle, 1/6/2009

"We at the City of Galena, IL have used the "Ladtech System"™ in our infrastructure since 2002 on some of the busiest streets in our city. In particular, the location of Highway 20/Spring Street. This area has approximately 11,500 to 12,000 vehicles a day of which heavy trucks comprise about 40% of the traffic. We have looked at these installations on a regular basis and have found that the Ladtech System"™ has stood up to the heavy load traffic with no defects; therefore we have allowed the Ladtech® rings to be used in our entire infrastructure.

Jeff Saylor - Facility/Area Manager, City of Galena, IL

"Just wanted to let you know that here at the Summerland Sanitary District (located in Santa Barbara County area) we have been using your rings for years. Our operators here at the treatment plant have raised every manhole in our district (Hundreds) using your rings and have never had any problems. Thanks for making such a great product.

Michael Sullivan, Operations Supervisor 1-21-2008
